

Event Name: ICMR Visit

Venue: ICMR, Nehru Nagar Belgaum

Date: 20/02/2026

Event Summary

An educational visit to the Indian Council of Medical Research (ICMR) was organized to provide students with practical exposure to biomedical and clinical research activities. The visit aimed to bridge the gap between theoretical knowledge and real-world research practices.

During the visit, students were introduced to the structure and functions of ICMR as the apex body responsible for the promotion and coordination of medical research in India. Officials and research scientists provided an overview of research facilities, public health initiatives, and funding opportunities available for students and researchers.

The students had the opportunity to visit research laboratories and observe various instruments and facilities used in biomedical investigations. Demonstrations were provided regarding research protocols, data collection methods, and ethical considerations in clinical studies. Special emphasis was given to research ethics, Good Clinical Practice (GCP), and the importance of maintaining quality and integrity in scientific research.

An interactive session was conducted where students engaged with scientists and clarified their doubts related to clinical trials, research methodology, drug development processes, and career opportunities in research. The session was highly informative and encouraged students to explore research-oriented career paths and higher education such as PhD programs.

The visit proved to be an enriching learning experience, enhancing students' understanding of research methodology, ethical practices, and the practical aspects of healthcare research. Overall, the program successfully provided valuable academic and professional exposure, motivating students toward innovation and scientific excellence.
